This report reproduces the prespecified inter-rater reliability analyses for the finalized set of 237 paired PRECIS-2 ratings. Codes 1–5 represent the ordinal pragmatism scale; code 6 represents Missing and code 7 represents Not Applicable. The analysis implements an alpha estimation approach reviewed by B.K. and applies it to the final dataset and agreement definitions.

1 Data Setup and Validation

```
## Setup completed successfully.
```

```
## Number of raters: 2
```

```
## Number of rated observations: 237
```

```
## Observed codes: 1, 2, 3, 4, 5, 6, 7
```

2 Primary Analysis

2.1 Crude Agreement

Table 1: Summary of crude agreement under each agreement definition.

Definition	Agreements	Total	Crude_Agreement
Total	115	237	0.4852
Range	165	237	0.6962
Censored	110	211	0.5213
Buckets	152	237	0.6414

2.2 Krippendorff’s Alpha

Table 2: Summary of Krippendorff’s alpha under each agreement definition.

Definition	Observations	Alpha	Lower_95_CI	Upper_95_CI
Total	237	0.3005	0.1717	0.4193
Range	237	0.3350	0.1805	0.4734
Censored	211	0.3391	0.2039	0.4617
Bucketed	237	0.2471	0.1133	0.3721

3 Secondary Analyses

3.1 Crude Agreement by Domain

Table 3: Crude agreement by PRECIS-2 domain and agreement definition.

3.2 Mean Signed Deviation from Consensus

Table 4: Reviewer deviation from consensus after excluding codes 6 and 7.

Reviewer	Eligible observations	Mean signed deviation	Mean absolute deviation
Aarian	211	-0.01422	0.4597
Merrick	211	0.02844	0.4360
